THE ORACLE THAT WEARS US

Interactive Installation — Fashion & Emerging Technologies

Nadine Allan # 20250828

CORE QUESTION

How does algorithmic mediation reshape authorship in fashion?

CONCEPT OVERVIEW

The Oracle That Wears Us is an interactive fashion installation.

A robotic drawing plotter creates wearable fabric pieces based on audience interaction.

Visitors interact with an arcade-style “Oracle” machine. Their movements and inputs are translated into unique generative patterns.

These patterns are drawn directly onto fabric. Throughout the event, the fabric pieces accumulate into a collective garment.

Authorship shifts from designer → machine → public.

TECHNOLOGIES USED

HARDWARE

- Robotic Drawing Plotter (fabric output)
- Arcade Machine (interaction console)
- Projection System (tent environment)
- Camera Sensor (user input)

SOFTWARE

- Unity (interaction interface)
- TouchDesigner (generative visuals)
- OSC (real-time communication)
- Python (pattern translation to plotter)
- Generative AI (text / symbolic logic)

SYSTEM ARCHITECTURE

USER INTERACTION FLOW

Step 1 — Approach

- Participant enters the tent space.
- Projection visuals show traces of previous interactions.

Step 2 — Interaction

User:

- Presses buttons
- Completes short input sequence

System records:

- Rhythm
- Timing
- Input pattern

Step 3 — Interpretation

The Oracle generates:

- A short AI “oracle statement”
- A symbolic classification
- A visual shift in projections

Step 4 — Materialization

The plotter begins drawing on fabric.

Pattern properties vary based on interaction:

- Density
- Line structure
- Geometry
- Fragmentation

Step 5 — Accumulation

Fabric fragments:

- Dry
- Become modular pieces
- Attach to a growing garment structure

The final fashion piece emerges from collective participation.

OUTPUT

PHYSICAL OUTPUT

- Generative line-based fabric fragments
- Modular wearable pieces:
 - For the runway
 - For the interactive installation
- Visible record of participation

SPATIAL OUTPUT

- Projection-mapped tent interior
- Robotic drawing performance
- Evolving environment
